

WDM3001 iPhone Project

The final project for this class is an iPhone App developed with one of the following:

- HTML, CSS and Javascript.
- jQuery
- Other (with permission from instructor)

You may select any subject, but design and functionality must include the following:

- Functional Application without “show-stopper” bugs
- Custom App icon
- Custom start screen
- Application work files turned in to instructor
- Unified interface design
- iPhone interface look and feel
- Consistent quality in graphics, images and text
- Interaction functionality is usable and easy to understand
- Text is spelled correctly and is grammatically correct
- Interface design elements must be original design of student
